Rapid

+ MEX Maintenance Software

Automate your maintenance management

Integrate Rapid workforce management software with MEX, a powerful maintenance management solution.

Enhance your work order management system

Empower your maintenance managers to streamline their work order management processes with the additional compliance features of Rapid Permit To Work.

Sync new work orders	Rapid will periodically search MEX for newly created and updated work orders. If a matching company in Rapid is found, the integration will update the record so the data is synchronised across both systems.
Seamless work order management	Easily audit work orders within Rapid to ensure that any expected safety documentation has been provided, is approved and is associated with the correct job.
Improve payment administration	Track the time contractors spend on work orders and allow them to declare job completion to ensure you are being charged fairly and accurately.

Boost efficiency with a fully integrated system

Remove manual handling and reduce risk with this powerful integration.

Reduce double handling	Use the Rapid system to track updates made to existing work orders.
Block non-compliant suppliers	Ensure only inducted and compliant contractor companies with a valid work order can sign into site.

Fully integrated modular workforce management software.

System requirements

Advanced security policies are applied in the integration between Rapid and MEX to ensure end-to-end data protection.

Rapid	Users require Rapid Contractor Management and Rapid Access with Permit To Work.
MEX	Users require MEX's Maintenance Management package and access to MEX's OData API.

Increase data privacy and security

Protecting your company's information is our highest priority. Rapid's information systems are ISO 27001 certified which demonstrates our commitment to industry standard protocols to safeguard your sensitive information.

ISO 27001 certified data centres	Our data centres are committed to meeting the highest standards of information security and are ISO 27001 certified.
Encryption	Rapid's data handling uses the latest encryption methods to prevent unauthorised access to data while at rest and in transit.
